**Subject:** my draft comments  
**Attachments:** clean SACC asbestos mk comments.docx

I have attached the draft with my comments. Somehow, between the meeting and now, the draft became unbalanced in relation to several issues (Issues that were not, or hardly discussed at the meeting now have been inserted in this document) including:

potency of different fibers

fiber size

brake replacement epidemiology

references--I have added several crucial references.

I have made comments (mainly in 4.3 and 4.4) to try and help to rectify this and **added several references** which any expert in asbestos epidemiology would include as important. I fear the current draft without correction will be regarded as unbalanced toward asbestos 'defense' by the scientific community.

Thanks.
